 - [eagle-i-apps.properties](#)

Introduction

A new version of the eagle-i applications is now available for [download](#). The release notes documented on this page apply specifically to version 3.5.0. Please see the [Upgrade Checklist](#) for information on how to perform an upgrade.

How to use this document

Notes for this release are broken up into four categories: [New Features, Improvements and/or Bug-fixes](#), [Known Issues](#), [Prerequisites for Upgrading & Deprecated Properties](#). Within each category, notes are further divided into the application that is affected. Known issues will be cumulative of known issues that have not yet been resolved. If you are unsure what applications are applicable for your installation, please refer to [this page](#).

Most institutions will be interested primarily in the *General* (affects across multiple applications) and *SWEET* sections within each category.

Institutions that have installed the optional SPARQLer application will be interested in the *SPARQLer* section within each category.

Institutions that have installed the optional Institutional Search will be interested as well in items that have been tagged **INSTITUTION** in the *Search Application* section within each category.

For those who have chosen to administer their own network of nodes, the sections of interest are *General*, items that have been tagged **CENTRAL** in *Search Application* and *Network Administration (Central Search Only)* sections within each category.

New Features, Improvements and/or Bug-fixes

General

- **IMPROVEMENT** eagle-i's look and feel has been updated, including a wordpress update. Hosted content has been re-arranged (e.g. navigation links), please update your `eagle-i-apps.properties` file.

Search application

Applies to both central and institutional search, unless otherwise specified.

- **NEW FEATURE** **CENTRAL** There is now a container available on the iPS Cell Search form. This container is configured by setting a property to point to a location with some HTML snippet, `eaglei.search.stemcell.infographic.url`. On the eagle-i iPS Cell Search form, this container is being used to display an infographic.
- **BUG** **CENTRAL** When navigating to the iPS Cell Search from Central Search, users can now use the browser's back button to go back to Central Search.
- **BUG** **INSTITUTION** Contact and citation buttons on the instance page are now displayed properly.
- **BUG** When on an instance page, users can now use the browser's back button to go back to the results page.

SWEET application

- **BUG** Ontology Browser link in header & footer now works as expected.

Known Issues

The following are known issues that may be addressed in releases after 3.5.0. If there is a suitable workaround for a given issue, it will be listed.

Current Release

General

- Applications fail to start, version 2.0-MS2.21 and older
 - There was a bug that prevented following redirects.
 - As of 04/20/15, the workaround is to update the `eagle-i-apps.properties` file with the new locations
 - At some point in the near future, we will be re-adding the old hosted locations for backward compatibility.

Prior Releases

3.0.4 Release

General

- Incomplete records may be displayed in central search if no upgrade is done. Extensive work has gone into our ontology for this release to bring eagle-i to ISF compliance, in addition to enhancing the modeling for induced pluripotent stem cell types. If existing data is not migrated to the new ontology, the central search application may not be able to interpret/recognize obsolete ontological properties and will not display them.

Network Administration

Available in central search only.

- We have seen an issue with how strictly different versions of tomcat parses local-node.xml file. One version insisted on case sensitivity for the tag, and one version was fine. For example, tomcat version 7.0.42 does not have same parsing as version 7.0.41. In other words, using `<node url="https://some.institution.edu">` in the local-node.xml file was acceptable in one version, while the same exact line caused a parsing error (note the lower case 'url' instead of the documented 'URL').

2.0 MS 3.07 Release

General

- When using drop down boxes in Chrome, it is not possible to jump to an entry by typing the first few letters. *(No workaround)*

SWEET

- It is possible to save records with unnamed embedded instances. Doing so results in losing any information entered for the embedded instances. *(No workaround)*
- If more than one organization record has the same exact name, only one of them will be displayed in the "Work With My Organizations" dropdown. *(No workaround)*

Search application

Applies to both central and institutional search, unless otherwise specified.

- Entering text with square brackets, [&], in the search box will execute a blank search, rather than searching for the text. *(No workaround)*
- "Cite This Resource" - The keyboard shortcut for copying does not work in Firefox or Chrome. *Workaround:*
 1. Use the Copy from the browser's menu bar or from the popup while right clicking.

Network Administration

Available in central search only.

- In the network administration UI (at `<myNode>/central/admin`), there is no direct way to remove a node (institution) from a group. *Workaround:*
 1. Use central/admin to edit the node:
 2. Take the node out of service (a check-box near the bottom of the form)
 3. Save
 4. Edit the node again, removing the value from the field "Belongs to group"
 5. Put the node back into service (the same check-box)
 6. Save
- In the network administration UI (at `<myNode>/central/admin`), there is no direct way to change the group a node belongs to. *Workaround:*
 1. Use central/admin to edit the node:
 2. Take the node out of service (a check-box near the bottom of the form)

3. Save
4. Edit the node again
5. Enter a new name in the field "Belongs to group"
6. Put the node back into service (the same checkbox)
7. Save

Prerequisites for Upgrading

SPARQLer

Also known as the public SPARQL endpoint.

Changes to Properties

eagle-i-apps.properties

The following property has been added:

- `eaglei.search.stemcell.infographic.url`
 - Not required
 - No default

The values for the hosted navigation links have changed. Please update your properties file:

Updated navigation links

```
## Central Navigation bar location URL
eaglei.ui.gwt.uiconfig.centralNavbarUrl=https://www.eagle-i.net/embed/central-navigation/

## Central Footer Navigation bar location URL
eaglei.ui.gwt.uiconfig.centralFooterNavUrl=https://www.eagle-i.net/embed/central-footer-navigation/

## Institution Navigation bar location URL
eaglei.ui.gwt.uiconfig.institutionNavbarUrl=https://www.eagle-i.net/embed/institution-navigation/

## Institution Footer Navigation bar location URL
eaglei.ui.gwt.uiconfig.institutionFooterNavUrl=https://www.eagle-i.net/embed/institution-footer-navigation/

## SWEET Navigation bar location URL
eaglei.ui.gwt.uiconfig.sweetNavbarUrl=https://www.eagle-i.net/embed/sweet-navigation/

## SWEET Footer Navigation bar location URL
eaglei.ui.gwt.uiconfig.sweetFooterNavUrl=https://www.eagle-i.net/embed/sweet-footer-navigation/
```
