

Scheduler Overview

Welcome to the Scheduler Open Source Wiki space

About Scheduler

Effective, streamlined coordination of Clinical Research Center (CRC) resources and scheduling of subject visits are common challenges in the clinical research community. Unable to find a tool that could accommodate the differing and intricate requirements across multiple institutions and facilitate CRC operations, Harvard Catalyst, the Clinical and Translational Science Center at Harvard, set out to build a software application (HCCRC Scheduler) under the advice and guidance of several cross-functional, cross-institutional subcommittees.

In this wiki space, you will find technical documentation, software downloads, information on how to get in touch with us, and more. Utilize the left-hand navigation to traverse the pages or use the links on this page.
