

SHRINE 3.2.0 Installation Guide

Be aware that SHRINE 3.2.0 no longer has ACT-specific branding in the new web client. The legacy web client and the dashboard web client is no longer available in this release. However, this release has been tested with the ACT Ontology 4.0.

This guide was created to assist system administrators in the installation of a SHRINE 3.2.0 system. The system is composed of an installation of I2B2 software (<http://www.i2b2.org>) and SHRINE software. This guide assumes you are installing a typical SHRINE site in an existing network.
